CS 651 - Assignment 7
Design & Implement a Web Application
that uses JSP and Java Beans

In this assignment you are to design an application of your choice that makes use of at least one Java Beans (any type). The web application should have a JSP front page that calls and makes use of a Java Bean to provide some functionality for the application. You can create a game or a simple calculator or some creative application of your choice. You must have at least one Java Bean (any type) in your application design. Additionally, you may also use any other application development features that you like. If you want, you can take your finished assignment 5 (the last version of the inventory system) and add a Bean to that application or you can start fresh with your own different application design.

Submit your files to the **Assignment 7** submission area in Blackboard.
